Khyati Parihar

San Diego, CA | (858) 214-0846 | khyatiparihar@gmail.com | LinkedIn | GitHub | Portfolio

Senior Data Analyst | Product Analytics | Experimentation | Python | SQL | Tableau

6+ years of experience using SQL, Python, Tableau, and statistical analysis to drive business decisions across enterprise clients. Built dashboards, conducted cohort and segmentation analysis, tracked KPI performance, and generated insights that improved retention, CSAT, and operational efficiency. Strong background in experimentation, stakeholder reporting, and translating complex data into actionable recommendations.

EDUCATION

University of California San Diego, La Jolla, California **12/2026**
M.S. Business Analytics (Rady Incoming Scholarship Award Recipient)
Relevant Coursework - Deep Learning & Neural Networks, NLP, Recommender Systems, Large-Scale ML Systems, Causal Inference, Cloud Computing

University of Delhi, New Delhi, India **05/2019**
Bachelor of Arts in Economics (Honors)

SKILLS

Languages & Tools: Python (Pandas, NumPy, Polars, SciPy, scikit-learn), SQL, R, Git, Excel
Data & Analytics: Matplotlib, Tableau, Power BI, AWS QuickSight, Google Analytics, A/B Testing, KPI Reporting, Cohort Analysis, Segmentation, Root-Cause Analysis, Statistical Analysis, EDA
ML & AI: LLM Fine-Tuning, NLP, Embeddings, PyTorch, XGBoost, Random Forest, Classification, Regression, Clustering, Feature Engineering, Hyperparameter Tuning
Agentic AI: n8n, Claude API, Zapier, HubSpot Breeze AI, Prompt Engineering, Workflow Automation

WORK EXPERIENCE

Senior Data Analyst, 80/20 Endurance, San Diego, CA **03/2026 – 06/2026**

- Led operational performance analysis across onboarding, CRM, and support workflows processing 23,000+ monthly tasks, using process metrics to sustain **99%** execution accuracy
- Built cross-system workflow pipelines spanning APIs, CRM platforms, and communication tools, reducing operational turnaround time by **90%** and improving process visibility across teams
- Designed workflow instrumentation and structured event logging across onboarding, CRM, and support processes, enabling **KPI tracking** for provisioning throughput, communication events, ticket handling, and process accuracy
- Implemented policy-based decision workflows for refund operations, analyzing exception cases and escalation patterns to automate **95%** of incoming requests while preserving financial controls
- Developed Python-based validation and diagnostic frameworks to analyze workflow reliability, exception trends, and edge-case behavior, improving pre-production readiness and decision confidence

ML Data Analyst, *Netomi, Gurugram, India* **09/2024 – 06/2025**

- Led offline evaluation and A/B testing across model variants, prompt strategies, and response policies, using precision, recall, F1, CSAT, and deflection as core performance KPIs; drove automated task resolution from **30% to 55%** through metric-led optimization
- Architected scalable training data pipelines and schema in SQL and Snowflake; constructed K-Means segmentation and error analysis workflows to expose failure modes and save **100+ hours/week** in manual QA overhead
- Developed analytical monitoring frameworks for multi-intent workflow performance, using intent-level diagnostics and pipeline bottleneck analysis to reduce inference latency by **60%**
- Fine-tuned & productionized Llama 2/3/3.1 & GPT-4 on millions of customer conversations across 40+ enterprise clients; achieved **90%+ intent classification accuracy** across airlines, retail, telecom, and gaming industries
- Built automated validation workflows in Python, pandas, scikit-learn, and spaCy for pre-production QA and release certification, reducing onboarding time to under two weeks across **10+ enterprise client** deployments

Data Analyst, *Netomi, Gurugram, India* **07/2021 – 08/2024**

- Constructed SQL and Tableau dashboards tracking deflection rate, CSAT, and feature adoption; conducted cohort and segmentation analysis to surface actionable insights, improving decision-making and increasing **client retention by 50%**
- Performed root-cause analysis on production metrics using SQL and Python (Pandas, SciPy), delivering recommendations that boosted CSAT from **80% to 95%+** and supported client expansion
- Conducted cohort, segmentation, and behavioral analysis on customer support and adoption data, identifying performance drivers that shaped workflow optimization, model improvements, and **client expansion decisions**
- Partnered with product, operations, and client success stakeholders to support end-to-end analytics for intent classification and NLU deployments, including data preparation, KPI tracking, evaluation, and post-launch monitoring, translating performance trends into actionable recommendations

- Optimized LLM model efficiency through intent decomposition & training data reduction - splitting overloaded intent clusters into targeted sub-models, improving response accuracy while **reducing per-model resource consumption**

Associate Analyst, *Coforge Ltd**,** Greater Noida, India* **11/2019 – 06/2021**

- Developed SQL-driven Tableau and AWS QuickSight dashboards tracking weekly security KPIs across multiple business units; translated complex data into clear stakeholder narratives, accelerating decision-making by **30%**
- Created Excel-based vulnerability tracking models with pivot tables and trend analysis to monitor PCI compliance release scans across TrustWave tools (Fusion, AppScanner, TrustKeeper), ensuring **100% regulatory compliance** for secure releases
- Queried and analyzed vulnerability data using SQL to identify open threat patterns across OpCos; visualized findings in Tableau to prioritize remediation, reducing security exposure by **40%** and accelerating remediation timelines

TECHNICAL PROJECTS

Intuit QuickBooks Upsell Targeting - ML Classification & Profit Optimization, *Academic project* **10/2025 - 10/2025**

- Engineered predictive features and trained Logistic Regression, Random Forest, XGBoost, & MLP ensemble models on 75K business records; applied profit-threshold targeting to scale predictions to an 800K+ population – ranked #2 among 60+ competing teams

Sydney Airport - Applied AI Hackathon, *Professional project* **09/2024 – 11/2024**

- Designed a GenAI solution for Sydney Airport, combining LLM prompting with real-time weather and flight delay data to improve traffic flow, reduce congestion risk, and enhance passenger operations

United Airlines - Data Science Hackathon, *Professional project* **04/2024 – 08/2024**

- Built United Airlines' first LLM chatbot, optimizing classifier performance and response quality across deployment topics; used SQL and prompt-based extraction from airline web content to achieve 98% accuracy
